Stage review

Completion stage review template

Document D1.1 Completion review procedure

Review of OHS processes and performance on completion of a construction project permits a government agency to continuously improve its OHS management activities. The purpose of the completion review is to analyse OHS performance in the project, consolidate the project team's experiences and capture ideas for the improvement of OHS in future construction projects. The following questions should be explored in the completion review.

- How effective were OHS management processes throughout the project lifecycle?
- What worked and what didn't?
- How could OHS processes and outcomes be improved in future projects?

The completion review should address four major areas of OHS performance:

- project OHS efficiency (that is, how seamless were OHS processes, especially relating to the transfer of OHS information between project stages?)
- project OHS effectiveness (that is, how well did OHS processes work in the project?)
- project OHS impacts (that is, how did the project perform in OHS? Were KPIs and targets met?)
- OHS lessons learnt (what could be done better to enhance OHS outcomes in future projects?)

The completion review will, in general, focus on eight elements (outlined below). It is important to recognise that the scope and required documentation for the completion review may vary from project to project, depending on the project type and complexity. The following should only be used as a guide to the review and the eight elements are not in order of importance.

Agency staff participating in the completion review (referred to as the completion review team) should, as a minimum, include:

- one representative from the project OHS team
- an agency staff member involved in developing the contract documentation
- a senior management representative, able to make decisions and delegate actions.

Key stakeholders such as designers and construction contractors should also be included in the completion review.

Scope of completion review

Each of the eight review elements described below should be considered.

1. Project OHS team

- Assess whether the staffing levels were appropriate to ensure OHS was properly managed in the project.
- Determine if appropriate OHS skills were available and/or whether OHS training needs were clearly identified and adequate training provided to project personnel.
- Assess whether the project OHS team possessed an appropriate mix of skills and sought input from
 representatives of all key function areas (for example design, construction, maintenance) to provide effective
 oversight of OHS through the lifecycle of the construction project.
- Identify any issues that affected or hindered the agency's OHS activities during the project or impacted on the
 procurement of safe design and construction practices throughout the construction project.

2. Project resources and schedule

- Evaluate the extent to which project resourcing decisions (including the project schedule) impacted OHS at the planning, design and procurement, construction and completion stages.
- The review should consider whether project OHS requirements were comprehensively identified (were
 important, reasonably foreseeable issues missed at the planning, design and procurement stages?), the cost of
 implementing OHS requirements and impacts of the project schedule.
- The completion review team should then evaluate the effectiveness of OHS resourcing decisions and the impact of these decisions on project OHS performance.
- Where possible, performance should be compared to that of comparable construction projects.

3. OHS contract structure

- Assess whether the OHS requirements stipulated in the various contracts (for example with designers, construction contractors etc) incorporated all relevant OHS aspects of the work, whether the agency's OHS goals were well defined and clearly communicated in briefing documents and whether contract documents represented a reasonable allocation of OHS responsibility.
- Assess whether the OHS requirements specified in contract documents adequately reflected the project OHS goals and risk profile of the construction project. Were contracts appropriately structured to meet project OHS goals, given the level of risk?
- The completion review team should compare the OHS requirements against other agency projects to ensure consistency.

4. Risk management

- Review the approach used to identify project OHS risks and assess the adequacy of this approach.
- Assess whether OHS risks have been assessed based on the probability and consequence of occurrence, and have been properly classified as high, medium or low.
- Assess whether appropriate risk mitigation actions were incorporated into the different stages of the project and check whether all stakeholders involved in the planning, design and procurement, construction and completion stages of the project contributed to the risk management process.
- Determine if communication of OHS risk was adequately undertaken during the lifecycle of the construction project, in particular at the interface between project stages.

5. Communication and consultation

- Determine whether OHS information was disseminated effectively throughout the lifecycle of the project, in particular when different organisations or stakeholders were involved.
- The completion review team should consider the effectiveness of the transfer of knowledge and information between the various stakeholders involved in the project. This should involve knowledge and information transfer from contractors/consultants to the agency, as well as from the agency to contractors/consultants. Reference to the transfer of risk information via the project risk register may need to be included.

6. Design review

- Evaluate the adequacy of design OHS reviews, including the level of detail provided in drawings and specifications, and assess whether the outcomes were consistent with the overall project OHS goals.
- Assess whether all structures, systems and components incorporated in the design were assessed for OHS risk implications.
- Appraise the suitability of changes made at the outline and full conceptual design phases.

- Consider whether emergent OHS issues identified in the construction and completion phases could have been reasonably foreseen, eliminated and/or reduced during the design stage.
- Further analysis of the number of OHS design issues identified during the construction and completion stages should be undertaken and consideration given to the effectiveness of processes to manage design changes during these stages so as to eliminate or reduce OHS risks.

7. KPIs and targets

- Assess whether the project OHS KPIs/targets and performance measures were well-defined, resulted in the early diagnosis of OHS problems during the construction project and enabled positive OHS changes.
- The completion review team should also assess whether the OHS KPIs/targets and measures and reporting requirements stipulated in contracts with consultants and contractors were adhered to and provided a good basis for monitoring project OHS performance.
- Evaluate the level of compliance with the reporting requirements for OHS and determine whether the report submission schedule provided sufficient information for the timely resolution of potential OHS issues problems.
- The completion review team should include in this analysis any KPIs/targets set for the agency as well as those
 of consultants/contractors.

8. Project performance

- Review construction contractors' performances against the project OHS charter and project OHS management plan.
- Assess whether the way the project was managed is consistent with the OHS requirements of the agency and has resulted in the safe and successful execution of the project.
- Consideration of project performance should also cross reference other review elements such as risk management, incidents, communication and consultation and targets and KPIs.

Required documentation

In general, the following documents may need to be referenced:

- designers' contracts
- construction contractors' contracts
- results of and responses to project design OHS reviews
- design documentation
- risk management plans
- project risk register
- copies of agency, consultant and contractor OHS reports
- change management forms.

Other associated material may be requested by the review team to ensure a complete and accurate review is performed.

Document D1.2 Completion review report template

A detailed completion review of the construction project captures information about the efficacy with which OHS management actions were implemented during the project. This can inform the procurement of similar construction projects and support organisational learning and improvement. It is useful to compare the outcomes of design OHS risk assessments with OHS problems experienced during the construction phase. This provides valuable information about the effectiveness of the design OHS review process. During the completion review, accident/incident/near miss and other OHS data collected during the project should also be analysed. The OHS performance of each project participant should be evaluated as well as the quality of communication and cooperation with regard to OHS at the interface between project participants.

This template provides a sample of information indicating an appropriate level of detail for inclusion.

Positive outcomes

For your reference, Document D1.2 in Booklet 5 has a worked example of positive outcomes.

		Was this an agency requirement?		Include in action plan?
Review element	What worked well — Outcome	Yes/No	If No, what action will be taken	Yes/No
OHS project team		☐ Yes ☐ No		
Project resources and schedule		☐ Yes ☐ No		
Project contract structure		☐ Yes ☐ No		
Risk management		☐ Yes ☐ No		
Communication and consultation		☐ Yes ☐ No		
Design review		☐ Yes ☐ No		
OHS KPIs and targets		Yes		
Project performance		Yes		

Suggested improvements for future projects

For your reference, Document D1.2 in Booklet 5 has a worked example of a suggested improvement.

		Was this an agency requirement?		Include in Action Plan
Review element	What could be improved — Outcome	Yes/No	What action will be taken	Yes/No
OHS project team		☐ Yes ☐ No		
Project resources and schedule		☐ Yes ☐ No		
Project contract structure		Yes		
Risk management		☐ Yes ☐ No		
Communication and consultation		☐ Yes ☐ No		
Design review		Yes		
OHS KPIs and targets		Yes		
Project performance		Yes		

Project completion review action plan

For your reference, Document D1.2 in Booklet 5 has a worked example of a suggested improvement.

Any recommendations to be implemented following the project completion review should be recorded in a completion review action plan to enable the easy retrieval of relevant information and tracking of actions recommended.

Document D2.1 Completion inspection prompt sheet

Before users occupy/use a building or facility, the agency should undertake a review of the completed structure against the specifications. Installation of any finishes completed earlier in the project should be inspected to ensure integrity has been maintained and that all previously identified OHS risks have been addressed appropriately. In addition to reviewing the completed building/facility, the opportunity to identify OHS risks that did not present themselves at the planning, design and procurement or construction stages can be assessed and managed. The following table contains prompts to assist agency staff in the identification of possible OHS hazards/risks apparent at the completion stage.

Any risks that are identified should be recorded in the risk register (see document A5.2, booklet 2), and monitored for completion using the risk treatment plan (see document A5.3, booklet 2).

Hazardous chemicals/ dangerous goods

- pesticides
- fuel storage
- cleaning products
- dangerous goods
- air pollution/water/waste water
- labelling
- storage

Slips, trips, clearance

- electrical cables
- uneven ground/finishes
- cable covers
- use of amusement equipment
- flooring design
- poor lighting
- steps/floor level changes
- different flooring surfaces
- access/egress
- hidden hazards
- edge protection
- head clearance
- tight spaces

Fire safety

- evacuation plans
- fires fire effects
- dangerous goods storage
- obstructing fire equipment

Fire safety

- inappropriate fire fighting equipment
- security of fire prevention equipment
- flammable goods

Plant

- training
 - certification
 - emergency management
 - personal protective equipment
 - supervision
 - maintenance
 - isolation/segregation people
 - hand tools
 - plant registration, for example lifts, escalator

Construction

all works complete and as per specification

Plant/equipment

- layout
- signage
- security
- fit for purpose
- appropriateness of signage
- access to plant
- exclusion zones
- PPE requirements

Plant/equipment

- emergency shutdown
- access/egress
- lighting
- storage
- waste

Security

- site access
- building access
- vandalism
- alcoves
- lighting

Vehicle safety

- site layout
- parking
- vehicle/people segregation
- speed
- signage
- accessibility during emergency management
- loading operations docks and people

Electrical safety

- power supply no spiking, lack of continuity
- overloading systems
- power tools
- underground services
- generators
- earthing
- unauthorised access
- lighting
- lack of power boards
- weather
- protection of leads
- cables/height/pathways
- location in relation to other equipment

Accessibility

- lifts
- ramps
- parking
- pedestrian movement
- signage
- disability
- egress
- emergency vehicles
- emergency evacuation points

Ergonomics

- manual handling
- over reaching
- twisting
- lighting
- excess weight and height access
- bending over
- functionality

Maintenance

- materials nominated
- access
- lighting
- vibration
- lifting
- plant registration
- slips and trips
- discharges including temperature
- noise
- frequency of maintenance
- operational requirements, for example air intake
- storage facilities
- working at heights
- access to all services/systems requiring ongoing maintenance
- type of materials use appropriate

Document D3.1 Post-occupancy review (POR) procedure

In the post occupancy review (POR), the emphasis is on learning from the 'hands on' experience of those using the building or facility. A POR allows the agency to understand whether the OHS expectations of actual users of the building/facility have been met and how they feel the building performs from an OHS perspective. A POR provides the opportunity for the agency to learn about how the building supports agency personnel and operations. The diagram below shows a step by step procedure for conducting a POR.

Step 1 Identify the POR strategy

Identify the scope of the POR and the probable aspects of the evaluation. For example, you may only want to do certain areas or floors at a time.

Step 2 Decide on the approach

Identify what aspects the review must address.

Issues to address:

- objectives and priorities (are there areas or floors that you think are a priority?)
- timing
- are you benchmarking against other construction projects?

Step 3 Brief for the POR

Develop a process for how the POR is to be achieved.

Issues to address:

- objectives
- timing
- who will carry it out?
- who should be involved (for example, users, visitors, designer, maintenance personnel, cleaners etc)?
- methods to be used (will it be a survey emailed to all occupants, a focus group etc?)

Method: Some ways in which PORs can be undertaken include:

- walk-around inspections
- surveys/questionnaire
- focus groups
- forums.

Step 4 Plan the POR

Select approach that will meet your needs.

Issues to address:

- decide when the review will be carried out
- review POR questionnaire (see document D3.2)
- prepare schedules and agendas

- invite those involved in the review (step 3)
- make appropriate arrangements for undertaking the review (for example, notify occupants of review and their desired input; arrange invites and meeting room for focus group etc)
- inform respondents and/or occupants about the purpose of their involvement and how the data will be used
- advise on feedback arrangements and timelines (for example, will only reviewers get feedback or will all those participating get feedback as well?)

Step 5 Carry out the POR

Distribute and/or collect information for POR questionnaire, carry out focus group meetings, or conduct what other method of collecting information has been chosen.

Issues to address:

- Arrange for distribution of questionnaires (this may be via email, gathering answers by asking questions etc) or other means of collecting feedback.
- Arrange for the collection of the questionnaires if information is not being personally gathered. This should be carried out after a relatively short period of time is possible.
- Collate data.
- Analyse information

Step 6 Prepare the report

Record and feedback findings.

Issues to address:

Determine

- structure of the report (an example report has been provided at document D3.3)
- who will get a copy of the report
- whether separate reports are required depending on the audience (for example, participants may not need to know about planned changes to operating procedures).

Step 7 Action in response to POR

Feed information into project risk register. If existing, place relevant information into the common risk register.

Issues to address:

- Input risks identified through the POR into the project risk register.
- Determine what actions/strategies need to be taken.
- Feed information into a common risk database if one exists. This will allow for sharing of information and learnings.
- Commence the establishment of benchmarking construction projects based on the risks identified.

Document D3.2 Post-occupancy questionnaire

A post-occupancy questionnaire is a tool for gathering 'customer' feedback. It is designed to capture OHS information from the occupants or users of a building or facility. Regardless of status, building/facility location, size or type of space, this is the opportunity to get the broadest feedback from internal (that is, agency) and external (for example, public) 'customers' about work areas, common/public spaces and the building/facility in general.

It should be noted that there are various techniques in conducting post occupancy reviews, one of which is a post-occupancy questionnaire. Step 3 of document D3.1 recommends an agency determine what type of review will be conducted, for a particular project. The following information is suggested content but it may not be applicable in all circumstances. Project-specific particulars might need to be added as appropriate.

- Construction project name
- Construction project location
- Construction project team information
- Building/facility description and operation
- Construction project scope
- Building/facility occupants
- Interviewee details (occupant/maintenance/visitor)

Site and Surroundings

Post-occupancy review:	
Areas for questioning	Example
	Is it easy to walk into and around the building?
	Is the front entrance of the building easy to identify and access?
Pedestrians Access	 Are footpaths/pavements designed and maintained for safety?
	 Do pedestrian services include adequate footpaths with designated crosswalks, curb cuts, and appropriate slopes?
	 Can you get into and out of the building without negative interaction from vehicles, transport, bicycles, etc?
Vehicles Access	 Are pedestrian and vehicular traffic separate, except in designated crosswalks?
	Is there a location that allows safe drop-off/pick-up?
	Is it easy to manoeuvre your car into the parking bays?
Parking Access	Is entry/exit of the parking area easy to navigate around?
	Is there adequate visitor parking?
	 Can you negotiate the internal roads without any major issues?
Road layout Access	Is entry and exit into the property easy?
Nour layout Access	 Is there adequate signage to indicate locations and entry/exit points?
Drainage	 Does the stormwater pool or create rivers when it rains?

Post-occupancy review: Areas for questioning	Example
How the building impacts with surroundings	 Do you have to cross a busy road unaided?
Security (External lighting)	 Is there adequate external lighting to the building during non daylight hours?
Security (Access)	 Is access restricted during normal daytime operations? Are there provisions to restrict access after nominated business hours? Are these adequate?
Any other hazards not identified	 Have any OHS hazards not been identified? If so what?

Maintenance

Post-occupancy review:	
Areas for questioning	Example
Plant Access	Are you able to gain easy access to all plant and equipment?
	 Is there enough room to conduct standard servicing of plant/equipment?
Servicing Access	 Is there enough room to undertake major works on plant/equipment?
	 Are servicing records kept up to date?
Layout Access	 Does the layout of the plant/equipment pose any hazards?
	 Was information about all known risks provided?
Information transfer about building/plant	 Was information about the safety requirements associated with the maintenance and/or working near plant/equipment provided?
Suitability of plant/materials chosen	 In your opinion, has suitable or fit for purpose plant been chosen?
Lifespan of plant/materials	 Does the type of materials selected mean that a more intensive maintenance program is required?
	 Is there adequate ventilation in the work areas when you are undertaking maintenance duties?
Ventilation	 Has adequate ventilation been provided to accommodate for the plant/equipment installed?
Lighting	 Is the lighting provided sufficient to perform maintenance tasks?
Sharaaa	 Is there adequate storage provide for spare equipment/supplies?
Storage	 Do the storage facilities provided require you to stretch or bend over?
Waste disposal	 Are there facilities to dispose of general waste materials?

Post-occupancy review: Areas for questioning	Example
	 Can dangerous/hazardous waste be disposed of?
Any hazards not identified	 Have any OHS hazards not been identified? If so what?

The building/facility (general)

Post-occupancy review: Areas for questioning	Example
Dimensions of areas	 Are administrative areas in appropriate locations and their size suitable for their usage?
Circulation	Is movement around the building able to be accomplished with ease?
Access throughout building (Vertical/horizontal)	Is the building able to be navigated easily?Is it easy to find the lift/stairs/escalators?
Access throughout building (Blind spots)	 Does the Building have any "blind spots" that are difficult to monitor? Does the Building have good sight lines in corridors and public spaces?
Access throughout building (Delivery of goods)	 Has the building got facilities provisions to allow the safe handling of the delivery of goods?
Heating/cooling	 Does the building have any areas that are noticeably cooler or warmer than other areas?
Noise	Rooms are adequately sound isolated?
Lighting (Natural light)	Is lighting sufficient for tasks?
Lighting (Artificial light)	Are light switches conveniently located?
Emergency management (Means of escape)	Is there adequate signage installed throughout the building that advises occupants how to exit the building?
Emergency management (Evacuation points)	 Are the evacuation points easily accessible?
Emergency management (Alarm system)	Is the alarm system easily identifiable when activated?
Emergency management (Fire equipment)	 Can you access the fire equipment easily?
Building surfaces/fabrics (External finish (including roof, walls and windows))	 Are the use of colour and texture appropriate?
Building interior (Walls)	Are the wall finishes appropriate for the use of the building?Are there any sharp edges/finishes to the walls?
Building interior (Doors)	Do the doors impede on pedestrian traffic?

Post-occupancy review:	
Areas for questioning	Example
Building interior (Furnishings/fittings)	 Are the furnishings and fittings supplied suitable for the use intended?
Building interior (Floors (including work	 Are the floor/wall finishes appropriate for the use of the building?
areas and common areas))	 Are floor coverings appropriate to the room's/area's intended use?
Storage	 Is the storage provided appropriate for the intended use and sufficient in size and layout?
Amenities	 Is the number and size of restrooms adequate throughout the building?
Any hazards not identified	 Have any OHS hazards not been identified? If so what?

Work area

Post-occupancy review:	
Areas for questioning	Example
Work station	 Do you feel your immediate work provides you with enough space to perform your work safely?
Orientation	 How does the design of the building relate to the orientation to sun path and prevailing wind? Does this create uncomfortable situations while in the work place?
	Is there segregation of quiet and noisy areas?
Noise	 Do the spaces within work areas create an 'echo'?
	 Is there excessive externally generated noise?
	Is there adequate lighting within the building?
Lighting	 Does the lighting provided to your work area hinder your ability to work?
	 Is the light provided in your work area glare free?
Use	 How flexible is the building in accommodating user needs?
	How well has the heating system in the building performed?
Heating/cooling	 Are you happy with the overall comfort of the building environment?
Ventilation	 How is the building meant to be ventilated?
Colour	 Do you feel that the colours create a feeling of warmth and comfort?
Changes	 Is there adequate personal storage provided to prevent belongings being left around and creating trip hazards?
Storage	 Is there adequate storage facilities provided for work related supplies and systems?

Post-occupancy review: Areas for questioning	Example
Movement	 Are there areas that allow persons to 'assemble' or move to one side at potential bottlenecks?
Any hazards not identified	 Can you give examples of things which can hinder effective working?
	 Can you give examples of things which usually work well?

Document D3.3 Post-occupancy review (POR) report template

A POR is a way of providing feedback about the performance of completed buildings/facilities to the planning and design and procurement stages of future construction projects. The information from a POR can be used for informing future projects, either about the process of project delivery or the technical performance of the building/facility.

Short-term benefits of POR:

- supports identification of and finding solutions to problems in buildings
- facilitates timely response to user needs/concerns
- enables improvement of OHS performance based on 'in-use' feedback
- improves understanding of the OHS implication for buildings/facilities of changes, for example budget cuts or use of space
- can inform future construction project decision making.

Medium-term benefits of POR:

- optimises built-in capacity for building/facility adaptation to organisational change and growth
- helps when finding new uses for existing buildings/facilities
- increases accountability for building/facility performance by designers.

Longer term benefits of POR:

- enables long-term improvements in building/facility performance
- contributes to improvement in design quality
- enables more strategic management of built assets.

Below is an example of a report. The information in it would be the result of the feedback gathered from the questionnaire (see document D3.2).

For your reference, Document D3.32 in Booklet 5 has a worked example of a suggested Post occupancy review report.

Area	Strengths	Weaknesses	Action

Document D4.1 Plant/safety systems handover procedure

What is plant?

Plant is defined as any machinery, equipment or appliance. It includes things such as computers, scaffolding, lifts and escalators, tractors, hand trolleys, cranes, commercial fishing nets, arc welding gear, electric drills and pressure equipment such as air receivers and boilers.

What is a safety system?

For the purposes of this document a safety system (or an essential safety measure) is a system provided for the safety of people in a building or place of public entertainment.

The method of plant handover should be recorded, from the initial checking and testing to the takeover by the client. The OHS requirements for plant to be installed in the building/facility should have been identified during the design OHS reviews (see document B2.3 in booklet 3).

At the completion stage, a model client should ensure that all commissioning certificates, operating instructions and maintenance instructions for installed plant are obtained. A checklist of items to be considered has been developed. Sometimes, plant and safety systems are commissioned in phases. Records clearly identifying items of plant and its respective location should be maintained to keep track of which items have and which have not been accepted.

The following are examples of some of the issues to be considered in the handover of plant/safety systems:

Have the following been obtained?	Yes / No
Details covering the extent of the commissioning, that is, is it all plant or is it only certain areas?	Yes No
Copies of any statutory documents, for example certificate of occupancy/final certificate from the relevant building surveyor	☐ Yes ☐ No
Essential safety measures report from the building surveyor	☐ Yes ☐ No
Ensuring that all plant/building safety systems installed have been issued with a commissioning certificate	☐ Yes ☐ No
Ensuring that any plant/building safety systems that require registration have been identified and issued with current certificates	☐ Yes ☐ No
Test certification displayed on equipment as required by regulation	☐ Yes ☐ No
Confirmation that plant/building safety systems have been installed as per the drawings and specifications, and that all OHS requirements have been adhered to; and if any changes have been made, details of alternative arrangements (including OHS aspects) are to be provided to the agency for review before final signoff	Yes
Details of spare parts lists as recommended by vendor	Yes No

Plant and safety systems handover

Have the following been obtained?	Yes / No
Taking receipt of plant spare parts and supplies	Yes
Operating procedures for safe use of plant, including any special OHS requirements when working on or around plant, for example the need to wear hearing protection and warning devices	☐ Yes ☐ No
Maintenance details on all plant — while some plant operating manuals may have maintenance details included, there may be other plant in which this information is not included	☐ Yes ☐ No
Maintenance contractors nominated maintenance point of contact for preventive and breakdown maintenance during defects liability period	☐ Yes ☐ No
Warranty details	☐ Yes ☐ No
Details of the training to be provided by the contractor to agency staff on any plant and building systems	Yes
Log/maintenance books for all plant and services	Yes No
Keys/codes to all equipment	Yes No
Emergency shutdown procedures	Yes No
Any applicable materials safety data sheets	Yes No
A copy of a risk assessment undertaken prior to commissioning of plant and safety systems (see document 4.2)	Yes
Clear identification of any residual risks. These should be forwarded on to the occupants, facilities manager and building owner, if any of these stakeholders differ from the agency	Yes
Ensuring final clean up, completion of painting and insulation work or other items have been completed.	Yes

Document D4.2 Plant/safety systems risk review checklist

Although every effort should have been made to ensure appropriate plant was selected and that the design of plant installations and services took OHS into consideration, OHS issues may still arise during the commissioning stage of a construction project. For example, unforeseen OHS issues can arise as a result of:

- modifications made due to technological improvements, experience from other construction projects, changes in personnel, availability of plant/supply etc
- access to plant: not all work is completed when plant is to be commissioned and one part of the building may be available for occupation while another part of the building is still undergoing works
- there may be parts of the project that can only be detailed at a late stage.

Plant can be hazardous. An OHS risk assessment should therefore be undertaken to ensure that the plant is safely installed and ready for operation. The table below provides guidance on the issues that should be considered before commissioning plant. Issues identified should be subject to a risk assessment and recorded in the project risk register.

Hazard - Entanglement	Yes/No	If yes, what action needs to be taken to make it safe?
 Can anyone's: hair, clothing, gloves, tie, jewellery, cleaning brushes, rags or other materials become entangled with moving parts of the plant, or materials in motion? 		

Hazard - Crushing	Yes/No	If yes, what action needs to be taken to make it safe?
Can anyone be crushed due to:		
 material falling off the plant? 		
 uncontrolled or unexpected movement of the plant or its load? 		
 lack of capacity for the plant to be slowed, stopped or immobilised? 		
 the plant tipping or rolling over? 		
parts of the plant collapsing?		
 coming in contact with moving parts of the plant during testing, inspection, use, maintenance, cleaning or repair? 		
being thrown off or under the plant?		
 being trapped between the plant and materials, fixed structures or ongoing construction works? 		
 other factors? 		

Hazard	- Cut, stabbed or punctured	Yes/No	If yes, what action needs to be taken to make it safe?
Can any	one be cut, stabbed or punctured due to:		
•	coming into contact with sharp or flying objects?		
•	coming into contact with moving parts of the plant during testing, inspection, operation, maintenance, cleaning or repair of the plant?		
•	negative interaction with ongoing construction works in the area?		
•	work pieces being ejected?		
•	the mobility of the plant?		
•	uncontrolled or unexpected movement of the plant?		
•	other factors?		

Hazard - Shearing	Yes/No	If yes, what action needs to be taken to make it safe?
 Can anyone's body parts be: sheared between two or more parts of the plant, or between a part of the plant and a work piece, structure or construction works? 		

Hazard - Friction	Yes/No	If yes, what action needs to be taken to make it safe?
Can anyone be burnt, gain abrasions etc due to:		
 contact with moving parts or surfaces of the plant, or material handled by the plant? 		

Hazard - High pressure fluid	Yes/No	If yes, what action needs to be taken to make it safe?
 Can anyone come into contact with: fluids under high pressure in normal use, in the instance of plant failure? 		

Hazard - Striking	Yes/No	If yes, what action needs to be taken to make it safe?
Can anyone be struck by moving objects due to:		

Hazard - Striking	Yes/No	If yes, what action needs to be taken to make it safe?
 uncontrolled or unexpected movement of the plant or material handled by the plant? 		
 work pieces being ejected? 		
 mobility of the plant? 		
 other factors? 		

Hazard - Electrical	Yes/No	If yes, what action needs to be taken to make it safe?
Can anyone be injured by electrical shock or burnt due to:		
 the plant contacting live electrical conductors? 		
 plant working close to electrical conductors? 		
 overload of electrical circuits? 		
 damage to electrical leads and plugs? 		
 the machine being operated in a wet or dusty 		
environment?		
 no Residual Current Devices being used? 		
 other factors? 		

Hazard - Explosion	Yes/No	If yes, what action needs to be taken to make it safe?
 Can anyone be injured by explosion of: gases, vapours, liquids, dusts or other substances triggered by the operation of the plant or by nearby operations? 		

Hazard - Slipping, tripping and falling	Yes/No	If yes, what action needs to be taken to make it safe?
Can anyone using the plant, or located in the vicinity of the plant, slip, trip or fall due to:		
 uneven or slippery work surfaces? 		
poor housekeeping?		
 obstacles being placed in the vicinity of the plant? 		
 other factors? 		

Hazard - Falls	Yes/No	If yes, what action needs to be taken to make it safe?
Can anyone fall from a height due to:		
 lack of a proper work platform? 		
 lack of proper stairs or ladders? 		
 lack of guardrails or other suitable edge protection? 		
 unprotected holes, penetrations or gaps? 		
 poor floor or walking surfaces, such as a lack of a slip-resistant surface? 		
steep walking surfaces?		
 Insufficient or inappropriate supporting structure? 		
 other factors? 		

Hazard	- High temperature or fire	Yes/No	If yes, what action needs to be taken to make it safe?
Can any	rone:		
•	come into contact with objects at high temperature?		
•	be injured by fire?		
•	access fire protection equipment required for the area?		

Hazard - Temperature (thermal comfort)	Yes/No	If yes, what action needs to be taken to make it safe?
 Can anyone suffer ill-health due to: exposure to high or low temperatures from plant? 		

Hazard - Suffocation	Yes/No	If yes, what action needs to be taken to make it safe?
 Can anyone be suffocated due to: lack of oxygen, or atmospheric contamination due to plant operations or plant/services location? 		

Hazard - Ergonomics	Yes/No	If yes, what action needs to be taken to make it safe?
Can anyone be injured due to:		
 repetitive body movements? 		
 constrained body posture or the need for excessive effort? 		
 design deficiency causing physical or personal stress? 		
 inadequate or poorly placed lighting? 		
 lack of consideration given to human error or human behaviour? 		
 mismatch of the plant with human traits and natural limitations? 		
 other factors? 		

Hazard - Access/egress	Yes/No	If yes, what action needs to be taken to make it safe?
Can anyone be injured in any way because:		
 there is insufficient room to move around the machine when it is in operation? 		
 there is insufficient room to move around the machine when commissioning, maintenance, repairs or decommissioning occur? 		
 access available to all essential services? 		
 any other reasons? 		

Hazard	- Other hazards	Yes/No	If yes, what action needs to be taken to make it safe?
Can any to:	one be injured or suffer ill-health from exposure		
•	chemicals?		
•	toxic gases or vapours?		
•	fumes?		
•	dust?		
•	noise?		
•	vibration?		
•	radiation?		
•	other factors?

Document D5.1 Selection criteria for maintenance/cleaning service providers

Australian Government agencies acting as model clients should establish and communicate expectations of high OHS standards in the maintenance of their facilities. Model clients can have a significant impact on OHS in maintenance operations by:

- selecting safety competent and conscious maintenance contractors
- setting OHS performance goals and objectives for maintenance contracts
- closely monitoring the OHS aspects of maintenance operations
- holding the maintenance contractors accountable for their OHS performance.

Contractor OHS management system — assessment criteria

OHS policy		Viewed and accepted? Yes/No	Comments
•	Maintenance contractor has an OHS policy. Does it reflect the agency's own OHS commitment?	Yes	
•	Responsibilities for OHS are evident.	Yes	
•	Company's safety management system is adequate. The contractor's OHS management system must be evaluated prior to the contract being awarded.	Yes	

Project-specific requirements	Viewed and accepted? Yes/No/NA	Comments
 A list of equipment to be included in the maintenance program has been developed. This list could be used effectively to help establish the maintenance history program and to determine the necessary parts required to maintain equipment. 	 ☐ Yes ☐ No ☐ N/A 	

Project-specific requirements	Viewed and accepted? Yes/No/NA	Comments
 Contractor is aware of the characteristics, such as use, location and other issues specific to the building, plant and systems. 	 ☐ Yes ☐ No ☐ N/A 	
 Contractor has adequate resources dedicated to the effective implementation of the contract requirements and expectations. 	Yes No N/A	
 Arrangements for safety communication and consultation between maintenance contractor, the agency and the building's occupants are adequate. 	 ☐ Yes ☐ No ☐ N/A 	
 A system for assessing maintenance status is developed and adequate. The purpose of maintenance goals is to improve plant and systems performance in improving maintenance performance and measuring maintenance effectiveness. 	 ☐ Yes ☐ No ☐ N/A 	
 A program for planned major activities is developed. This should reflect the OHS KPIs and targets set by the agency. 	☐ Yes ☐ No ☐ N/A	

Company performance	Viewed and accepted? Yes/No/NA	Comments
 Accident figures have been provided for the past three years indicating total employees, fatalities and reportable accidents. These are acceptable to the agency. 	☐ Yes ☐ No ☐ N/A	

Company performance	Viewed and accepted? Yes/No/NA	Comments
 Details of any prosecutions, enforcement or improvement notices for breaches of health and safety legislation over the past three years have been submitted. 	☐ Yes ☐ No ☐ N/A	

Hazard management	Viewed and accepted? Yes/No	Comments
 Procedure is evident for hazard Identification and risk assessment. 	Yes	
 Procedure is evident for site safety management planning. 	Yes	
 Procedure is evident for safe work procedures. 	Yes	
 Maintenance contractor has acknowledged inherent OHS risks passed on by agency. 	Yes	

Training and competency		Yes/No	Comments
•	Contractor has displayed knowledge and experience of plant and systems applicable to the contract.	Yes	
•	Procedure is evident for site induction (applicable to the contractors' employees).	Yes	

Training and competency		Yes/No	Comments
•	Procedure is evident for ensuring employees have licences and certifications required by legislation.	Yes	
•	Company-provided personal protective equipment (PPE) and training on proper use is relevant to plant and systems.	Yes	
•	Procedure is evident for specific OHS training needs.	Yes	

Subcontractor management		Yes/No/NA	Comments
 Criteria are evide processes and pe 	ent for selection of subcontractors based on OHS erformance.	☐ Yes ☐ No ☐ N/A	
 Procedure is evid 	lent for subcontractor site induction.	☐ Yes ☐ No ☐ N/A	
	lent for ensuring subcontractor and subcontractor licences and certifications required by legislation.	☐ Yes ☐ No ☐ N/A

Stage Review

Completion stage review template

This stage review template can be used to verify that the completion stage KMAs have been implemented before the final 'signing off' for the project. Where appropriate, outstanding actions in relation to the KMAs can be recorded and implemented prior to 'sign off.'

Completion stage review

D1 Evaluate project performance		Assessment	Actions
•	completion review report completed within a reasonable period after project completion		
•	recorded results in an appropriate repository		
•	completion review reports circulated to all project participants to enable them to improve their OHS management processes and OHS performance in future construction projects		

D2 Perform project completion review	Assessment	Actions
 record of all the identified safety hazards in the project risk register (refer to document A5.2 in booklet 2) — the risk register is to be continually monitored and maintained 		
 an assessment of the building is to be conducted prior to hand over of the building to the agency 		

D3 Perform post-occupancy review	Assessment	Actions
 a review should be conducted no earlier than 3 months after occupation, but no later than 12 months — this will allow users to become familiar with the building recording of newly identified risks in the risk register 		

D4 Perform final review of plant/equipment	Assessment	Actions
 identification and registration of all required plant/equipment as per the requirements of the applicable state/territory legislation 		
 instructions on the safe use/maintenance of all plant and equipment installed 		

D5 Select safe maintenance providers	Assessment	Actions
 selection decisions based on OHS competence/performance 		

Further information

This booklet is the fifth in a series about clients promoting safe construction. Further information about the Model Client Framework is available from the Office of the Federal Safety Commissioner.

Acknowledgements

The authors would like to acknowledge that the project process map is based upon *A Generic Guide to the Design and Construction Process Protocol* developed by Kagioglou et al. (1998), The University of Salford, UK. Boxed and shaded descriptions of project phases are quoted directly from this Protocol. The Office of the Federal Safety Commissioner would like to thank Dr Helen Lingard, Dr Nick Blismas, Ms Tracy Cooke and Mr David Jellie from the School of Property, Construction and Project Management, RMIT University, who contributed to the development of this resource.
