

**DISMANTLE THE
RISKS, CHECK**

WHAT'S UP?

To avoid potential working at height risks, it's just better to work on the ground. But, in our industry, that's not always possible. For times you need to work at height, scaffolds are one of the safer options.

Scaffold safety begins at the very start of the job. So before you even set foot on the structure, check it's free of hazards and safe for use. Make sure your scaffold has been inspected at least once in the past 30 days. Never remove or move scaffolding components.
